

This worksheet is practice for carrying out the Schmitt–van Zelm algorithm by hand.

Example 1. Let $[C] \in \overline{\mathcal{M}}_{g,n}$ and G its dual graph. The fundamental class of $\overline{\mathcal{M}}_{g,n}$ has as its dual graph a unique vertex labeled g with n legs.

$$[\mathcal{M}_{g,n}] \longleftrightarrow \text{graph with vertex } g \text{ and } n \text{ legs}.$$

It is the identity for graph multiplication, so visually

$$G \cdot \text{graph with vertex } g \text{ and } n \text{ legs} = G.$$
